

Industry Note

Home & Garden

Alexander Battery Technologies

With the support of our highly skilled and experienced team, we design and manufacture completely customisable lithium-ion battery packs and chargers. From our **market-leading Battery Technology Centre and UK manufacturing facility**, we conceive and deliver innovative product solutions on time and budget to a global client base. Our experience includes:

- BMS
- Rapid charge times
- Environmental protection
- Lightweight battery packs
- Long life cycle
- Small to high kWh systems
- Certifications & approvals

Applications:

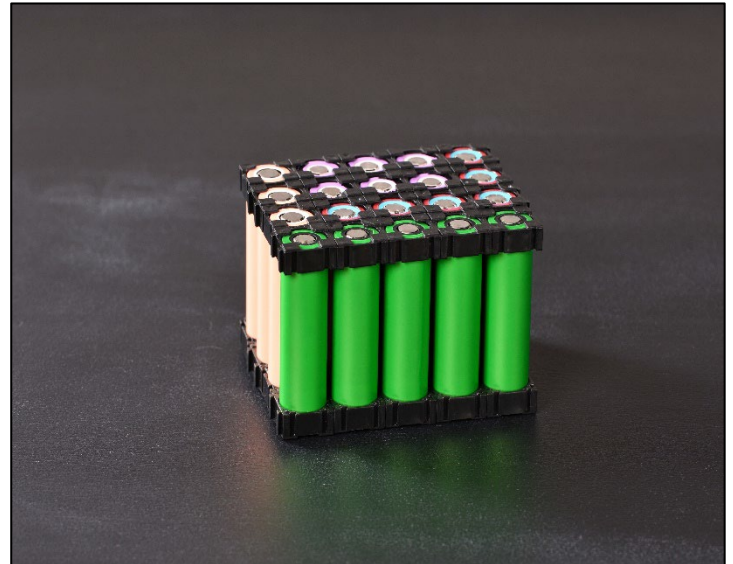

Home & Garden

With the household application market increasingly trending towards cordless technology, now is the best time for OEMs to refresh their ranges and focus on a cordless future. **Alexander Battery Technologies are already developing solutions for all battery-powered applications.** We can design and manufacture the perfect battery, from autonomous lawnmowers to robotic vacuum cleaners.

Battery Requirements

Alexander Battery Technologies manufacture fully customisable battery packs specifically engineered to integrate with your application. Our customers require their battery packs to have fast charging times and longer life cycles to ensure their application is successful. They will be built inside a robust shell to ensure maximum protection in all environments. The battery pack must be as light as possible to ensure the application is successful in the market.
